## W16-P1: add w6 blogs data into index.html as blogs section

The screenshot shows the Visual Studio Code editor with the following files open:

- `index.html`: Contains the HTML structure for the blogs section. A red box highlights the following code:

```
<!-- end of timeline -->

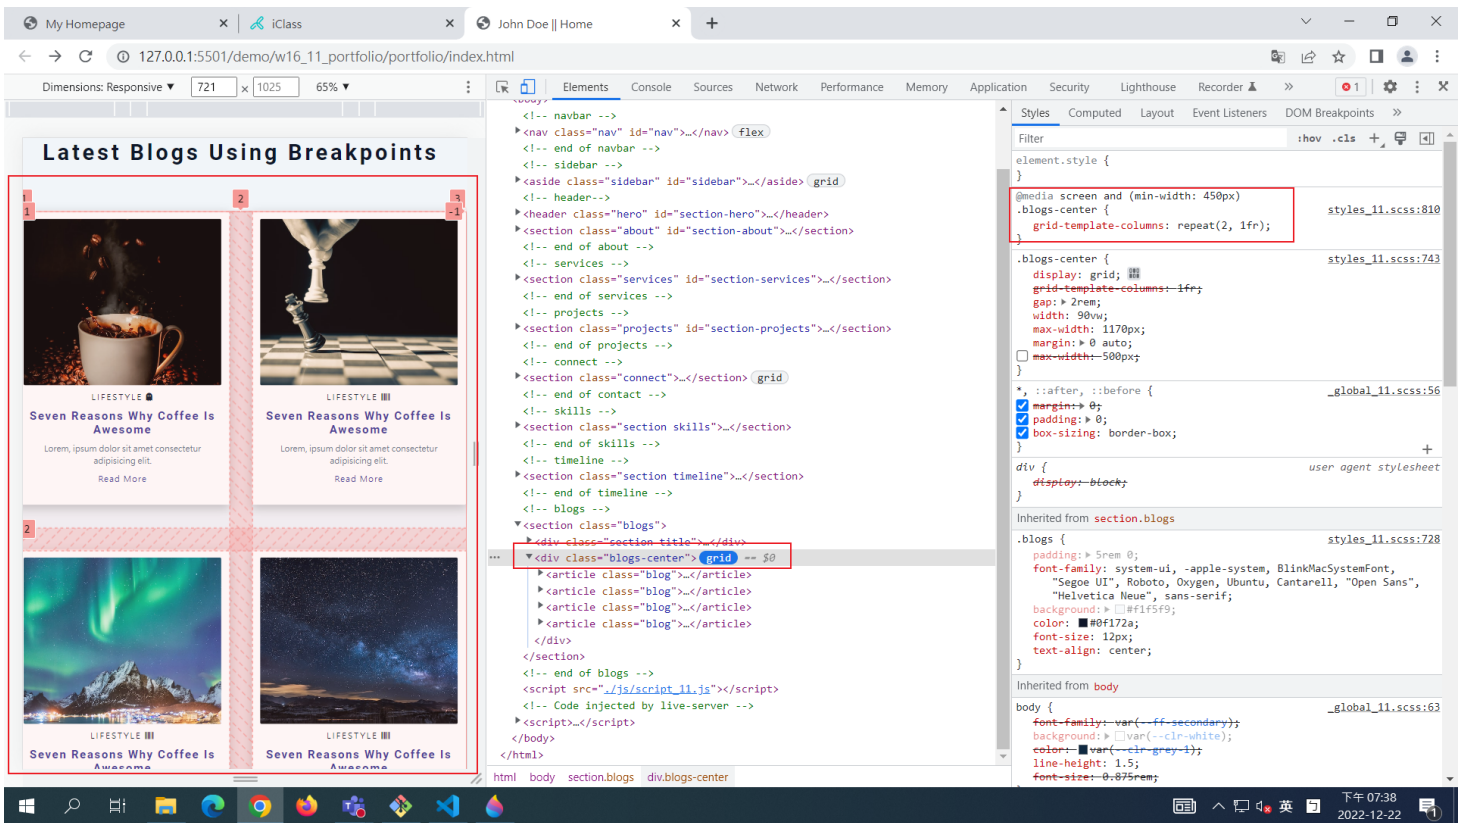

<!-- blogs -->
<section class="blogs">
  <div class="section-title">
    <h2>latest blogs using breakpoints</h2>
  </div>
  <div class="blogs-center">
    <article class="blog">...
  </article>
    <article class="blog">...
  </article>
    <article class="blog">...
  </article>
    <article class="blog">...
  </article>
  </div>
</section>

<!-- end of blogs -->
<script src="./js/script_11.js"></script>
</body>
</html>
```
- `styles_11.scss`: Contains the SCSS styling for the blogs section. A red box highlights the following code:

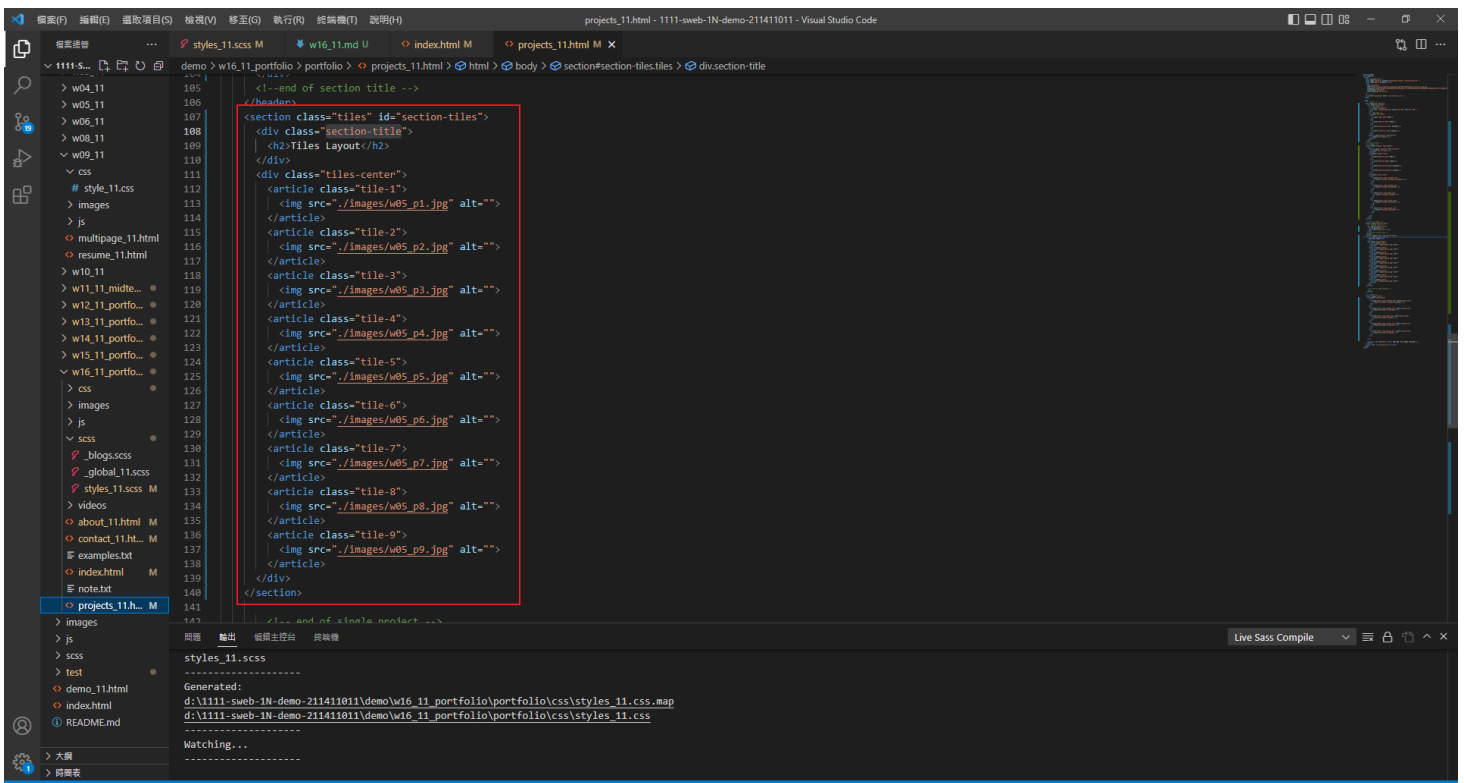

```
.blogs{
  @media screen and (min-width: 450px) {
    .blogs {
      &-center {
        grid-template-columns: repeat(2, 1fr);
      }
    }
  }
  @media screen and (min-width: 768px) {
    .blogs {
      &-center {
        grid-template-columns: repeat(3, 1fr);
      }
    }
  }
  @media screen and (min-width: 992px) {
    .blogs {
      &-center {
        grid-template-columns: repeat(4, 1fr);
      }
    }
  }
}
```

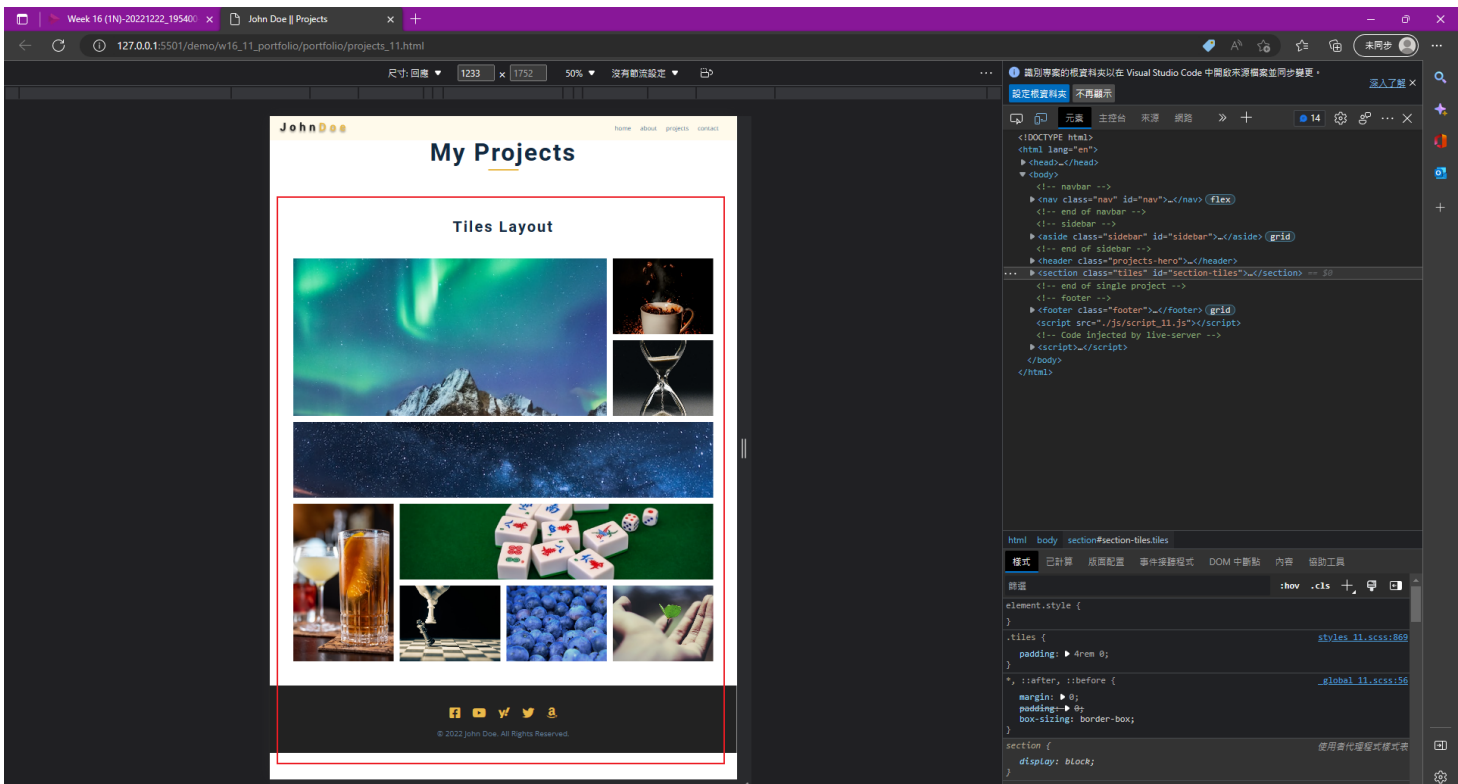

The terminal at the bottom shows the compilation of the SCSS file to CSS:

```
